Introduction

Purpose

This document specifies the software requirements for **TutorConnectPro**, a web-based platform that connects private tutors, parents/students, and tuition centers, with all onboarding, matching, and verification managed by a central Admin. This SRS is intended to guide design, development, and testing of the platform.

Scope

TutorConnectPro is a web application (desktop/mobile browser, no native app) with four user types: **Tutor**, **Parent/Student**, **Tuition Center**, and **Admin**. The platform facilitates:

- Tutor and tuition center onboarding with document verification.
- Posting and matching of tuition requirements between parents and tutors.
- A demo-class approval workflow before any tutor is assigned.
- Commission and subscription fee collection from tutors (screenshot-based payment proof, manually verified by Admin).
- Ongoing tuition management: attendance, monthly student reports, and in-app chat with Admin.
- A tuition-center sub-module for managing batches, attendance, performance, and fee reminders independently of Admin.

Direct monthly tuition-fee payments between parents and tutors, after the first month, are outside the platform (offline, personal transactions) and are **not** tracked in the system.

Definitions, Acronyms, and Abbreviations

Term	Meaning
Admin	The platform administrator/owner who manages all approvals, assignments, and finances
Tutor	An individual registering to provide private tuitions
Parent	A parent/guardian registering on behalf of a student (used interchangeably with "Parent/Student")
Tuition Center	A registered institute-type account offering batch-based tuitions for classes 1-10
Demo	A trial teaching session conducted by a tutor at the student's house before formal assignment
Commission	50% of the tutor's first month's salary, payable to Admin
Subscription	A recurring fee (Rs. 300/600/900/1200 for 3/6/9/12 months) paid by a tutor who wants to take on 2 or more tuitions concurrently
KYC Documents	Aadhar Card, Passport-size Photo, PAN Card (if available), Memos

Intended Audience

Development team, QA/testers, project stakeholders, and Admin/operations staff who will use the platform.

Overall Description

TutorConnectPro operates as a controlled marketplace rather than an open directory: tutors cannot see parent/student contact details, and parents cannot see tutor contact details, until Admin formally assigns a tutor to a tuition and both sides confirm through the demo process. All matching, approvals, and

financial verification pass through Admin as the central authority.

User Roles Overview

Role	Can Register Directly	Requires Admin Approval	Primary Purpose
Tutor	Yes	Yes (document + agreement verification)	Apply for and deliver tuitions
Parent/Student	Yes	No (only tutor/center are verified)	Post tuition requirements, receive assigned tutor
Tuition Center	Yes	Yes (document verification)	Operate batch-based classes (1-10), may also request tutors from Admin's pool
Admin	Pre-provisioned (not self-registered)	N/A	Oversee entire platform: matching, verification, payments, chat

Functional Requirements — Tutor Module

FR-T1: Tutor Registration

The registration form shall capture:

1. Name
2. Age
3. Qualification
4. WhatsApp number
5. Experience
6. Email ID
7. Password
8. Gender
9. Preferred location(s) — multi-select
10. "Can teach up to which class" — selection
11. Teaching mode — Online / Offline / Both
12. Document uploads (for verification):
 - Aadhar card
 - Passport-size photo
 - PAN card (optional/if available)
 - Memos (educational/experience certificates)
13. Read Agreement — displayed in full, accepted via a mandatory checkbox before submission. Agreement content includes:
 - 50% commission is payable from the tutor's first month's salary.
 - Tutor must not share student/parent profile information with anyone outside the platform.
 - Tutor must maintain professional conduct at all times.
 - Taking on 2 or more tuitions concurrently requires an active subscription.
 - Subscription pricing: Rs. 300 (3 months) / Rs. 600 (6 months) / Rs. 900 (9 months) / Rs. 1200 (12 months).
 - No fake registrations permitted.

Validation rules: - Email must be unique across the system. Duplicate email is rejected at registration ("fake registration" check). - All fields listed above are mandatory except PAN card. - Agreement checkbox must be checked to enable the Submit button.

Post-submission status: Registration enters a **Pending Verification** state. Tutor cannot log in to full features (cannot apply for tuitions) until Admin manually reviews and approves the uploaded documents and agreement acceptance.

FR-T2: Tutor Login

- Login fields: Email ID, Password.
- On successful login, tutor is routed to their dashboard, with feature access depending on approval status (Pending / Approved / Rejected).

FR-T3: Tutor Dashboard — Before Tuition Assignment

1. **View Tuition Requirements:** Tutor can see a list of all open tuition requirements posted by Admin (requirement details such as class, subject, location, salary range — as entered by Admin; exact requirement fields defined in FR-A2).
2. **Apply for a Tuition:** Tutor can apply to any listed open requirement. No pre-shortlisting restriction — any approved tutor may apply to any open requirement.
3. **Demo Outcome Tracking:** After a demo class is conducted (see FR-P4), the tutor's application shows a status of **Accepted** or **Rejected**, updated by Admin (Admin conveys the parent's decision to the tutor; the tutor never receives this decision directly from the parent). If Rejected, the tutor remains free to apply for other open requirements.
4. **Chat with Admin:** Tutor has access to a real-time, in-app chat inbox with Admin.
5. **Subscribe for 2+ Tuitions:** If a tutor wants to apply for a second (or further) concurrent tuition while already holding one, the system requires an active subscription. The subscription payment must be completed **before** the tutor is allowed to apply to the additional (2nd, 3rd, ...) tuition requirement. Subscription plans: Rs. 300/3 months, Rs. 600/6 months, Rs. 900/9 months, Rs. 1200/12 months.
 - Payment method: platform displays a payment QR/scanner; tutor pays and uploads a screenshot as proof; Admin manually verifies and marks the subscription as active.

FR-T4: Tutor Dashboard — After Tuition Assignment

1. **First-Month Commission Payment (mandatory gate):**
 - Once a tuition is assigned and the tutor has collected the first month's salary from the parent (agreed bilaterally, see FR-T4.2), the tutor must pay 50% of that first month's salary to Admin.
 - Payment method: platform displays a payment QR/scanner; tutor pays and uploads a screenshot as proof of payment.
 - Admin manually verifies the screenshot and marks the payment as **Paid**.
 - The system shall clearly display to the tutor: "Pay your first month's half salary to Admin — remaining months are yours," along with the current payment status (Pending Upload / Pending Verification / Paid).
2. **Salary Negotiation:** Monthly salary amount is negotiated directly and offline between tutor and parent; the system does not fix or enforce a salary figure. From the 2nd month onward, all fee payments happen directly between tutor and parent, offline, with no tracking or involvement by the platform.
3. **Monthly Earnings:** Tutor dashboard displays a running record/summary of monthly earnings entries logged by the tutor (self-reported, since actual payment is offline).
4. **Monthly Student Report:** Tutor must submit a monthly report per assigned student containing:
 - Attendance
 - Syllabus covered
 - Marks
 - Remarks
5. **Attendance:** Tutor self-marks attendance per class/day (simple checkbox-based marking; no geolocation or photo proof required).
6. **Apply for Additional Tuitions:** Tutor may continue to browse and apply for other open tuition requirements even after being assigned one (subject to the subscription rule in FR-T3.5 if this would be their 2nd+ concurrent tuition).
7. **Chat with Admin:** Real-time in-app chat remains available.

FR-T5: Visibility Restriction

Tutors shall **not** be able to view any parent/student contact details (name shown may be

partial/anonymized as part of the requirement listing, but phone/address/email are hidden) until Admin formally assigns the tuition to that tutor and the demo is accepted.

Functional Requirements — Parent/Student Module

FR-P1: Parent/Student Registration

The registration form shall capture:

1. Student Name
2. Parent Names (Mother and Father, or Guardian)
3. Email ID
4. Password
5. Mobile Number

Validation rules: - Email must be unique across the system. - One parent account may register **multiple** children/tuition requests under the same login.

FR-P2: Parent/Student Login

- Login fields: Email ID, Password.

FR-P3: Apply for a Tuition (Requirement Posting)

Parent posts a tuition requirement specifying:

1. Name of the student
2. Class
3. School name
4. Syllabus — CBSE / SSC / ICSE (selectable)

This requirement is submitted to Admin, who lists it for tutors to apply to (see FR-A2, FR-T3.1).

FR-P4: Demo and Tutor Assignment Workflow

1. Admin selects a tutor (from applicants) for a parent's posted requirement and arranges a demo.
2. The demo is conducted by the tutor visiting the student's house in person; scheduling is tracked in-app but the demo itself is a manual/offline process.
3. Attending the demo is at the parent's discretion (parents may or may not personally observe it).
4. After the demo, the parent marks the outcome in-app as **Accepted** or **Rejected** for that tutor.
5. Admin reviews the parent's decision and conveys the outcome to the tutor as Accepted/Rejected (tutor never sees the parent's decision directly — always relayed via Admin, per FR-T3.3).
6. If Rejected, Admin may offer the parent another tutor option; the parent may choose among candidates presented (parent's choice is not restricted to one option — parent may consider multiple tutor candidates before finalizing).
7. If Accepted, the tuition is formally assigned to that tutor.

FR-P5: Parent Dashboard — After Tutor Assignment

1. **Tutor Details Reveal:** Once Admin formally assigns a tutor and the demo is marked Accepted, the tutor's contact details become visible to the parent (previously hidden per FR-P6).
2. **Student Monthly Report:** Parent can view the monthly report submitted by the tutor (attendance, syllabus covered, marks, remarks — as per FR-T4.4).
3. **Monthly Tuition Fee Payment:** Handled directly and offline between parent and tutor from the first month onward; not tracked or processed within the platform.

FR-P6: Visibility Restriction

Parents shall **not** be able to view any tutor contact details until Admin has formally assigned that tutor to their tuition request and the demo outcome is Accepted.

Functional Requirements — Tuition Center Module

FR-C1: Tuition Center Registration

The registration form shall capture:

1. Principal/Owner Name
2. Email ID
3. Password
4. Documents of the center (for verification — uploaded as files)

Validation rules: - Email must be unique across the system. - Registration enters a **Pending Verification** state; Admin manually reviews uploaded documents and approves/rejects the center account.

FR-C2: Tuition Center Login

- Login fields: Email ID, Password.

FR-C3: Post Tutor Requirements to Admin's Tutor Pool

A tuition center can also request tutors from the same Admin-managed tutor pool used for individual parent requirements, by specifying:

1. Class
2. Salary
3. Eligibility rules for tutor
4. Location

This follows the same Admin-mediated matching flow described in FR-A2/FR-T3.1 (tutors from the shared pool can apply; Admin manages the assignment).

FR-C4: Tuition Center Independent Operations

Once Admin approves a tuition center's registration, the center's day-to-day operations are managed independently by the center's own staff, with **no further involvement from Admin**. This includes:

1. **Select Class:** Center manages classes 1-10.
2. **Batches:** Create and manage batches (a batch is a group of students, per class, taught by the center's tutor(s)).
3. **Attendance of Students:** Center staff mark attendance for students in each batch.
4. **Performance Tracking:** Record performance of each student.
5. **Send Performance to Parents:** Center staff can send a student's performance report to that student's parent through the system.
6. **Fees:** Track fee status per student.
7. **Fee Reminders:** Center staff manually send fee reminders to parents (no automated SMS/email trigger).
8. **Exam Reports:** Record and share exam reports per student.

Functional Requirements — Admin Module

FR-A1: Admin Login

- Login fields: Email ID, Password (Admin account is pre-provisioned, not self-registered).

FR-A2: Manage Tuition Requirements

- View all tuition requirements posted by parents and tuition centers.
- List/publish open requirements for tutors to browse and apply to.
- View and manage all tutor applications received per requirement.

FR-A3: Manage Tutors

- View all registered tutors and their profile/document/agreement status.
- Approve or reject tutor registrations after manual document review.
- Approve or reject tuition center registrations after manual document review.
- Approve or reject a tutor's demo outcome relay (conveying parent's Accept/Reject decision to the tutor, per FR-P4.5).

FR-A4: Payment Verification

1. **Subscription Payments:** Review tutor-uploaded payment screenshots for the 2+ tuitions subscription; manually verify and mark Active/Paid.
2. **First-Month Commission Payments:** Review tutor-uploaded payment screenshots for the 50% first-month salary commission; manually verify and mark as Paid.

FR-A5: Chat

- Real-time, in-app messaging inbox with all tutors and all parents (chat threads per user, from the Admin side).

FR-A6: Monthly Earnings Dashboard

- Displays platform earnings for the month/period, combining:
 - Commission payments (verified, from tutors' first-month salary)
 - Subscription payments (verified, from tutors taking 2+ tuitions)

FR-A7: Settings

- Admin Profile — view/edit profile details.
- Change Password.

Functional Requirements — Website Structure (Public Pages)

FR-W1: Home Page

Landing page introducing TutorConnectPro, with navigation to: - About Us - Login (role selector: Student/Parent, Tutor, Tuition Center, Admin) - Contact Us - "Chat with Admin" — a WhatsApp button that redirects to WhatsApp (separate from the in-app real-time chat available after login).

FR-W2: About Us

Static informational page describing the platform.

FR-W3: Login (Role Selector)

A single login entry point that routes to role-specific login forms: - Student/Parent Login - Tutor Login -

FR-W4: Contact Us

Static contact page with platform contact information.

Cross-Cutting Rules

1. **Duplicate Email Prevention:** No two accounts (across tutor, parent, or tuition center) may share the same email address; this is the platform's fake-registration check.
2. **Visibility Gating:** Contact details between tutors and parents are mutually hidden until Admin formally assigns and the demo is Accepted (applies both directions — see FR-T5 and FR-P6).
3. **Manual Verification Everywhere:** All document verification (tutor KYC, tuition center documents) and all payment verification (commission, subscription) is performed manually by Admin — no OCR, no automated payment gateway.
4. **In-App Chat vs. WhatsApp:** The home page WhatsApp button and the logged-in real-time chat inbox are two separate, independent communication channels.
5. **Offline Financial Transactions:** Monthly tuition fees (parent → tutor, from month 1 onward) are personal/offline transactions and are outside platform scope, except for the first-month 50% commission (tutor → Admin) which is tracked in-app via screenshot upload and manual verification.

Non-Functional Requirements

NFR1: Platform

- Web application only (responsive design for desktop and mobile browsers); no native mobile app in current scope.

NFR2: Technology Stack

- Database: **MongoDB**.
- Given the requirement to “keep it easy” alongside MongoDB, the recommended stack is the **MERN stack**: MongoDB (database), Express.js (backend framework), React.js (frontend), Node.js (runtime) — chosen for ease of development, a single JavaScript language across the stack, and natural fit with MongoDB's document model (useful for variable-structure data such as tutor documents, chat messages, and monthly reports).

NFR3: Security

- Passwords stored using industry-standard hashing (e.g., bcrypt).
- Role-based access control enforced for all four user types.
- Uploaded documents (Aadhar, PAN, photos, memos, payment screenshots) stored securely with access restricted to Admin and the uploading user.

NFR4: Usability

- Simple, form-driven registration flows suitable for non-technical users (parents, tutors).
- Clear status indicators for pending/approved/rejected states (registration, demo, payments).

NFR5: Availability & Performance

- Real-time chat should reflect new messages without requiring a full page reload.
- Standard web application uptime and responsiveness expectations for a moderate-traffic regional platform.

NFR6: Data Retention

- Uploaded verification documents and payment screenshots retained for audit purposes.

Assumptions and Constraints

1. Admin account(s) are created directly in the system/database (no public admin self-registration flow).
2. Tuition requirement fields visible to tutors before applying (class, subject, location, salary range, syllabus) are entered by Admin at the time of listing, based on the parent's or tuition center's original request.
3. "Monthly earnings" reported on the tutor dashboard is a self-reported record for the tutor's own reference, since actual monthly fee collection after month 1 is offline and untracked.
4. Tuition center's internal batch/attendance/performance/fee data is isolated to that center's own module and does not feed into Admin's platform-wide "Monthly Earnings" figure (FR-A6), which reflects commission and subscription income only.
5. No payment gateway (Razorpay, UPI API, etc.) integration is in scope; all payments are proof-of-payment (screenshot) plus manual Admin verification.

Appendix A: Tutor Read Agreement (Full Text)

The following is presented to every tutor at registration and must be accepted via checkbox before the registration can be submitted:

1. 50% commission is payable to Admin from the tutor's first month's salary.
2. Tutor must not share student and parent profile information with anyone.
3. Tutor must maintain professional conduct at all times.
4. Taking on 2 or more tuitions concurrently requires an active subscription.
5. Subscription fee: Rs. 300 for 3 months / Rs. 600 for 6 months / Rs. 900 for 9 months / Rs. 1200 for 12 months.
6. No fake registrations are permitted.
